

## Significant Benefits

- **Compatibility:** Our solution is backward compatible with most system control panels.
- **Flexibility:** Our solutions provide dealers with several options, including digital radio communications, Internet or a combination of both, depending on what is right for your application.
- **Reliability:** Honeywell's solutions offer the greatest reliability because of multiple technologies used together. This enables your dealer to provide you with systems that combine the best features of each technology.
- **Upgradeable:** With our solutions, future upgrades may be simple and quick, depending on your system.
- **Remote System Services:** Honeywell systems offer unprecedented services that provide many exciting options for remote system control and notification (check with your installing dealer for availability).

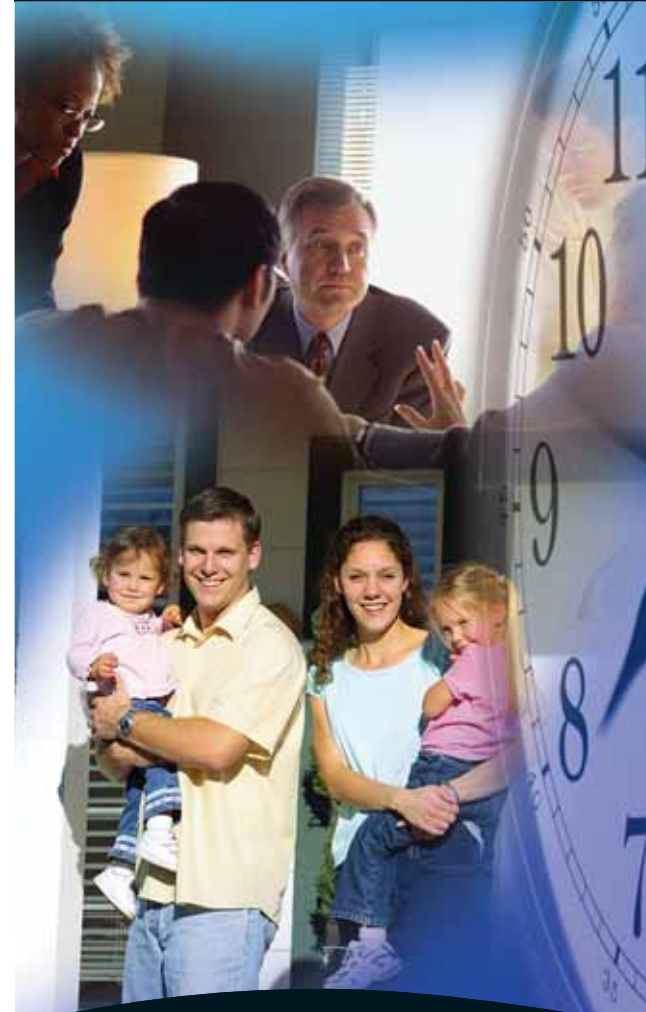

Your dealer will be happy to fully discuss the advantages of Honeywell digital communications solutions with you.

## Changing Technology

We are entering a new era of technology, where traditional communications methods are being replaced by more efficient, economical and useful ones. In the alarm industry, security system manufacturers and installing dealers have traditionally relied upon analog cellular networks to deliver alarm signals from the home to the central station. This network was used because it was the most reliable and economical wireless signal delivery method available.

Today, advanced digital wireless networks have become the primary method of signal transmission by cellular carriers. As a result, the U.S. Federal Communications Commission (FCC) ruled that wireless carriers will no longer be required to support analog wireless networks after February 18, 2008. In response, Honeywell has developed groundbreaking technology that fulfills the upcoming need for digital wireless signal transmission and offers you significant benefits.

**Due to the FCC ruling, in order to ensure that your alarm system continues to function optimally and without interruption, your Honeywell installing dealer will need to upgrade your current analog radio to a new Honeywell GSM digital radio communicator.**

## Upgrades Made Easy

To ensure that your alarm system continues to function optimally and without interruption, your Honeywell installing dealer will need to upgrade your current analog radio to a new Honeywell GSM digital radio communicator.

Our new Honeywell digital communications products offer a comprehensive solution that will help protect you, your family, your business and your assets. These products offer many great features and capabilities for you to take advantage of and will bring you continued peace of mind.

Your Honeywell security dealer is ready to work with you to deploy the best new digital communications products available.
