# Internet Connection Module Solutions

## Making Homes Smarter, Safer and More Energy Efficient

Honeywell's revolutionary Internet Connection Modules (ICMs) deliver the easiest, most affordable home control and management solutions available.

Now your customers can quickly and easily control their security systems, network cameras, heating and cooling, lights and more via touchscreens, PCs, laptops, cell phones—even PDAs! For a fraction of the price of traditional control systems, you can make their homes more efficient—and their lives easier—than they've ever dreamed possible!

The ICM solution is a great opportunity for both new and existing homes. It's time to connect to opportunity!

### Build Your Business with the Building Block Approach

Looking to build your business? The ICM is an excellent upsell opportunity and provides a convenient building block approach to home control and energy management. You can start out with simple security and home control and add enhanced, value-added services—like energy management and lighting—whenever your customers want by simply adding more ICMs.

### Benefits

- **RMR** — Bundle extra services for additional monthly fees such as ICM e-mail notification, etc.
- **Scalability** — Start with basic control and add enhanced home automation solutions as your customers' needs grow.
- **Customer Retention** — An appealing array of additional services and features help you add and retain satisfied customers.
- **Easy Installation and Setup** — Convenient setup wizard makes the ICM installation quick and easy. No installation software is required.
- **Seamless Integration** — Works with industry-leading products from Honeywell such as VISTA security systems and VisionPRO IAQ Thermostats.™

### Energy Management

### Instant Notification

### Control Systems Remotely

### Enhanced Security

### Remote Video Look-in

### Lighting Control

### Appliance Control

## Connect with Your Customers

With the ICM, your customers can control their home, protect their personal property and save money through energy management.

### Energy Management

- The ICMs communicate with each other to provide the following services:
  - Monitor energy usage
  - Automatically turn off lights and set back the thermostat when homeowners arm the security system
  - Remotely view and control the temperature of the home

### Property and Asset Management

- Receive alerts via text messaging or e-mails when events occur (e.g. when your customers' children arrive home safely from school)
- Monitor activities in and around the home
- Provide added property protection

### Safety and Peace of Mind

- In the event of a fire, the system can send a signal via your customers' network to shut down heating and cooling airflow to stop the spread of smoke
- Customers can view networked cameras locally and remotely, letting them check on their homes while on vacation or at the office
- Receive e-mail or text message notification of temperature alerts or security events such as water leaks or system arming and disarming
- Your customers stay connected whether they are at home or away
