## What's Missing From Your Installations? Take a Look Outside.

Although you provide your customers security to protect the interiors of their homes and businesses, you may be overlooking a critical and profitable part of the solution...the outside. Honeywell's all-weather, water-resistant 5816OD Wireless Magnetic Contact provides outstanding protection for sheds, gates and other surfaces in even the harshest climates. It's also great for outdoor valuables like generators, lawn equipment and snow blowers. Use the 5800PIR-OD Wireless Outdoor Motion Sensor for superior protection for driveways, pool areas, car lots, rooftops and more. Your customers can even receive text messages, e-mails and video notifications when using Total Connect™ Remote Services—increasing their awareness and peace of mind while increasing your opportunities for RMR!

If you're looking to set your business apart by providing your customers with the complete protection they deserve, we've got you covered.
