

Wireless Outdoor Motion Sensors

SUPERIOR OUTDOOR SECURITY SOLUTION
FOR YOUR BUSINESS

Protection Beyond the Perimeter

Honeywell

Extend Your Indoor Protection Outdoors

What's Missing from Your Commercial Security System? Take a Look Outside.

Although you rely on your security system to protect the interior of your commercial environment, you may be overlooking a critical part of the solution...the outside. Honeywell's Wireless Outdoor Motion Sensor is a unique new product that expands protection beyond the perimeter—providing a robust security solution that creates a safer environment while keeping you aware of what's going on around the exterior of your business.

Enhanced Awareness and Protection

- Provides superior protection for commercial environments including car lots, rooftops, building entrances and exits, schoolyards, loading docks, outdoor storefronts and more
- Monitors activity around the property and can alert you when movement is detected around specified outdoor areas via keypad chimes, videos or e-mails
- Excellent solution for guarding against copper theft in utility and electrical substations
- Connects to your company's existing security system and can be monitored by a central station 24/7
- Can be used to prevent loitering

Picture-Perfect Solution

- The sensors can work with cameras around the exterior of the protected premise to provide a higher level of security
- You can program the system to record video around entrances, exits or other vulnerable outdoor areas when motion is detected and you're away
- Ideal solution for keeping an eye on franchises or sites with multiple locations

No Mess

Installation is quick, easy and clean. There's no need to hire subcontractors or electricians to trench, excavate and repair pavement, landscaping, brick or concrete work.

Superior False Alarm Protection

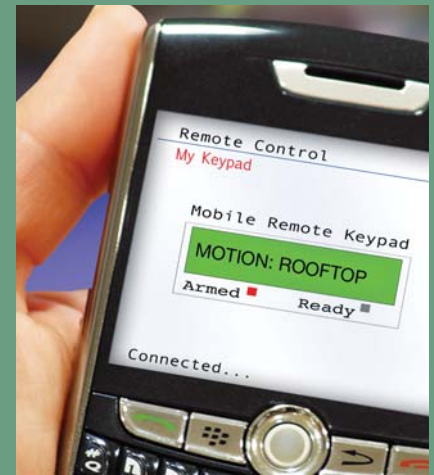

Two passive infrared (PIR) sensors must be tripped to declare an alarm, providing immunity from false alarms caused by small animals and other outdoor disturbances.

All-Weather Design

The sensors feature a robust, weatherproof housing designed to withstand the harshest outdoor climates with a temperature range of -4° F to 122° F (-20° C to 50° C).

Reliable Outdoor Protection

Honeywell's Wireless Outdoor Motion Sensors are an excellent complement to your existing commercial security system—providing you with a higher level of awareness, peace of mind and the robust, reliable outdoor protection your business requires. Ask your security professional for details today!

Always Connected

You can opt to combine the wireless sensors with Honeywell's Total Connect digital communications solutions, which let you utilize the Internet and various mobile devices to receive updates about activity in and around your business from any remote location.

- Receive e-mail alerts and notification via your PCs, laptops, cell phones and BlackBerrys when the sensor sees an object that triggers an alarm
- Get the information you need instantly so you can decide what action to take
- Customize the system to trigger an alarm in several ways, including sending a message, recording from a video camera or chiming a keypad to alert a security guard
