# ICM Solutions

## Build Your Business While Building a Better World

Honeywell's Internet Connection Modules (ICM) provide you with a unique new opportunity to differentiate yourself as a professional who is looking to benefit your business as well as the world around you. That's because these devices deliver the easiest, most economical energy management and control solutions available. Now your customers can quickly and easily control their HVAC, lights, security systems and more via touchscreens, PCs, laptops, cell phones—even PDAs! For a fraction of the price of traditional control systems, you can make their homes and businesses more efficient—and their lives easier—than ever before.

It's a great way to build your business while building a better world.

### ■ ICM Benefits

- **Going Green** – More and more of today's consumers are environmentally conscious. With the ICM, you can help homeowners save money, conserve energy, reduce the usage of natural resources and increase the value of their investment.
- **RMR** – You can opt to bundle extra services for additional monthly fees such as ICM e-mail notification, customized programming and more.
- **Scalability** – The ICM can be used on one system such as security or HVAC, and at a later date, lighting control can be integrated to reduce additional energy consumption.
- **Customer Retention** – With an appealing array of additional services and features, you're more likely to add and retain satisfied customers who see this solution as a strong value-added benefit when purchasing or renovating a home.
- **Easy Installation and Setup** – A convenient setup wizard makes the ICM installation quick and easy. No installation software or complex, expensive equipment is required.
- **Retrofittable** – The ICM solution is a great opportunity for both new and existing homes or businesses.
- **Seamless Integration** – The ICMs work with industry-leading products from Honeywell, including VisionPRO IAQ Thermostats™ and VISTA security systems.

# Build Your Business with the Building Block Approach

The ICM is an excellent upsell opportunity and provides a convenient building block approach to home control and energy management. You can start out with simple control and add enhanced, value-added services—like energy management, lighting and security—whenever your customers want by adding more ICMs. It's also ideal for business owners.

## Comfort and Conservation

With the ICM, you can help your customers preserve resources and save money through energy management while controlling their homes or businesses and protecting their property. There's no reason for your customers to heat or cool an empty home or business. With the ICM, they can program the heating or air conditioning to be set for the perfect temperature. They'll be more comfortable with their energy bills, too!

## Energy Management

The individual ICMs actually communicate to monitor energy usage, automatically turn off lights and setback thermostats when the security system is armed. They also let home and business owners remotely view and control temperature settings and can even lock the thermostat so it cannot be changed by others. Your customers can even receive useful e-mail alerts and advice on saving money, reducing energy consumption and more.

## Safety and Peace of Mind

- In the event of a fire, the system can send a signal to shut down heating and cooling airflow to stop the spread of smoke\*
- Receive e-mail or text message notification of temperature alerts or events such as water leaks, excessive high or low temperatures and system arming/disarming functions
- Your customers can view networked cameras remotely from an Internet connection, letting them check on their property while on vacation or at the office\*\*

*\*Network must be functional.*

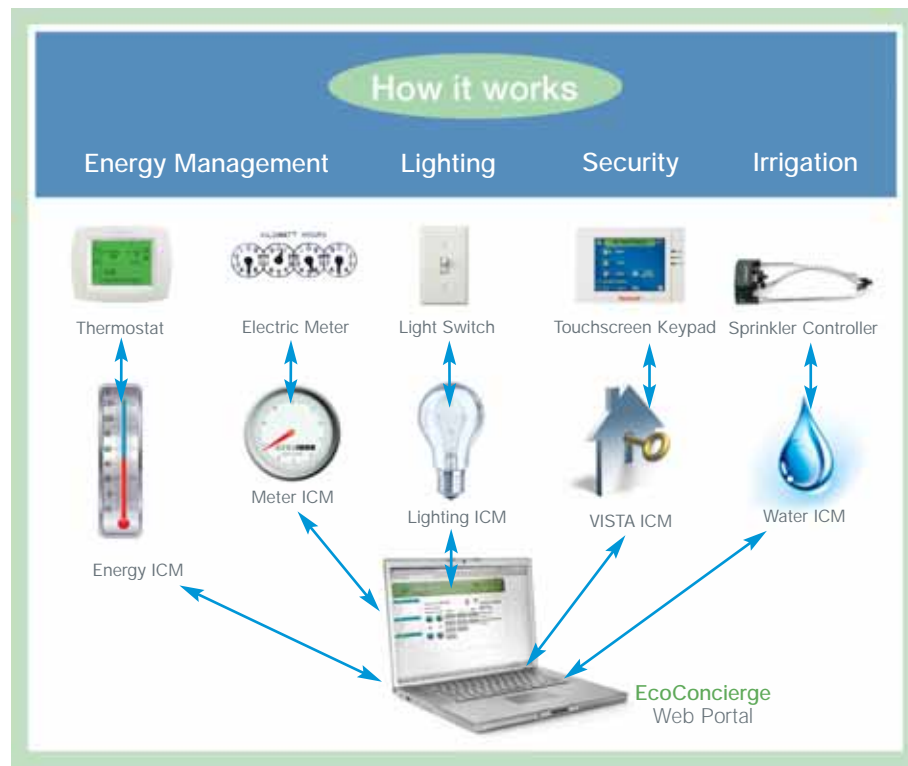

*\*\*Additional infrastructure required.*

## EcoConcierge Web Portal

The EcoConcierge is a secure, easy-to-use Web Portal your customers access via any Internet connection. They can program, modify and control the HVAC, irrigation, lighting and security in their homes and businesses, save up to 30% on their energy bills, reduce and monitor their energy consumption and more—from anywhere in the world!
