

ABUS Multi-Source/Multi-Zone

WHOLE-HOUSE DISTRIBUTED
AUDIO SOLUTION

Music to Your Ears

Honeywell

Listen Up!

If you're looking for a customizable, whole-house audio solution, listen to what Honeywell has to offer. The Honeywell state-of-the-art **ABUS** Distributed Audio Solution provides the simplest, most convenient and affordable way to bring high quality audio and music to any room. Now you can enjoy the rich, full sounds of your favorite CD, podcast, portable player or literally any audio source indoors or outdoors. In fact, it's less expensive and much more convenient than having a separate entertainment system in each room—not to mention not having to keep track of where your CDs have moved to. Sounds great to us!

Fun for the Whole Family

Honeywell's **ABUS** system sends stereo music throughout your home, extending your audio system to as many rooms as you choose. What's more, it makes music more enjoyable for every member of the family because it's customizable.

Listen to the news in one room while your spouse listens to jazz in the den and your kids blast rock or hip hop music in their bedrooms. Everyone can enjoy what they want—when they want it!

You're in Control

Convenient in-room controls allow you to effortlessly change selections, adjust the volume in each room or turn off the music locally or completely with the touch of a button or remote control.

Get Personal

Personalized Audio Playback lets family members plug in portable devices and game machines to be enjoyed in specific areas (i.e. a child's bedroom, etc.) without disturbing others.

Add a Local Input Module to any room and you can plug in your iPod®, Wii™ or Xbox® to automatically override the main audio source and create your own personalized entertainment. Even listen to your favorites indoors and outdoors if you'd like!

Versatile

Honeywell's **ABUS** Solution is so versatile it works with essentially any music source you can imagine! Use existing audio devices—over the air and satellite radio tuners, CD players, satellite and cable TV set-top boxes, iPod, Xbox, streaming Internet audio, Podcasts and more.
