

Loss Prevention: Honeywell Retail Solutions

**The risks
are too high...**

Honeywell

...to trust anyone else.

Complete Solutions Provider

The retail industry faces a number of challenges when it comes to loss prevention and asset protection. Honeywell's complete, user-friendly solutions address these challenges with their ease-of-use, remote accessibility, event traceability, adaptability and alternate usability.

Our retail industry experience gives us the expertise to recommend total solutions that perfectly fit your needs and budget. Whether you demand access control systems, sensors, alarms, POS exception solutions, cameras or DVRs, our solutions are all encompassing and let you save transaction data, then use video to track that data.

Your investment in a Honeywell system is backed by a team of experienced sales representatives and technical experts. As your Partner of Choice, our world-class support system consists of highly-trained pre- and post-sales support engineers who are always ready to assist you and answer any questions.

The Brand You Can Trust

Our industry-leading performance results from manufacturing products that set the standard in quality and reliability while remaining scalable to address the diverse needs facing facilities of all sizes. From the smallest stores to the largest retail chains, our solutions remove retail risk. Last year, retailers earned more than \$8 trillion globally, but lost more than \$200 billion to shrinkage. With that much profit at stake, security measures cannot be taken lightly. Whether implemented to stop losses, drive revenue or both, choosing the right solution has a proven impact on your profitability and Honeywell has the experience you need.

Complete Solutions

Implementing a Honeywell total solution gives your organization blanket coverage because retail loss prevention requirements are taken into account during the design phase and then delivered in the final product.

Transaction Data/Point-of-Sale

Honeywell's proven solutions let you associate captured transaction data with stored video. This secures your entire operation because everything from register transaction/POS to access control system data can be interfaced with the relevant video. Users can easily do exception reporting, quickly finding the video associated with that data.

Recording

Our complete line of analog and digital recording solutions is a comprehensive range of solutions that includes products best suited for any size application, all designed for usability, scalability and integration. This also provides video protection against liability, as our digital products provide tamperproof video that stands up to the strictest legal standards.

Honeywell digital systems are complete video management systems that not only integrate video, audio and data, but also enable you to remotely control and manage your data.

Cameras and Domes

We offer cameras and domes that feature a variety of speeds, performance levels and zooms. You can choose one or a number of reliable, robust cameras that precisely meet your enterprise's demands.

Access Control

Whether you demand access control for a single store door or an integrated solution that secures an entire network of branches, multiple warehouses and corporate headquarters, Honeywell offers a diverse range of solutions that protect your location 24/7/365.

Integrated Systems

Video, access, alarm and sensor capabilities can be optimized when integrated into a total solution. A well-configured, complete Honeywell solution is easy to use for everyone, even the newest employees, and improves efficiency by allowing simplified access to complete security information. This also facilitates getting information into the hands of the right authorities without delay.

A Winning Strategy

Honeywell feature sets are built specifically to target those issues most critical to retailers. All of our equipment is designed to make your life easier and boost your bottom line by turning challenges into advantages that help increase profit.

Ease-of-Use

Because high shrinkage rates are directly linked to high turnover rates, we approach product design with an emphasis on ease-of-use. With minimal training, your staff can effectively use Honeywell systems to counter shrinkage. By making our systems more intuitive, operator efficiency is increased and human error opportunities are minimized. This speeds up investigations and helps increase the chance of apprehension and conviction.

Remote Accessibility

The purpose of a retail security system is to let you keep a watchful eye on all of your locations whether or not you are on the premises. Honeywell's remote viewing option lets you do just that, whether you have full T1 connectivity or nothing more than a standard phone line. Your entire organization can view video and access information from all locations and from any web browser or central station, giving you the convenience of centralized information management.

Event Traceability

Most shrinkage results from a series of events. Tracing events and understanding their patterns makes it possible to accurately predict when incidents may occur and stop them. The key to doing this is the effective use of information, and as a loss prevention specialist you have a better chance of locating patterns when you rely on Honeywell's sensors, access control, POS and other transaction gathering tools and video surveillance systems to work separately and together to help you capture and interpret critical information.

Adaptability

A common concern retailers have in investing in a security system is the possibility that the system they purchase will either be obsolete by the time it's implemented, or won't function properly with equipment already in place. System innovations seem to be evolving on a daily basis, and Honeywell addresses this by providing the most adaptable products and systems on the market – systems that work with legacy equipment without sacrificing performance and are versatile enough to seamlessly integrate with new advancements as they arise.

Alternate Usability

Video surveillance and access control are often viewed solely as tools for loss prevention. However, Honeywell's complete solutions do much more than just fight shrinkage. We help you solve a wide variety of problems across your whole organization, creating a significant return on investment that impacts many areas, including: marketing research, remote site management, liability issues and claims, traffic-flow analysis, training and safeguarding data.
