

YOUR PARTNER OF CHOICE

**Reliability Is A Must,
Not An Option**

PROTECTING YOUR Valuable Assets

Everything about an airport or seaport is an asset you need to protect. Honeywell has the proven solutions that take your security to a higher level. We understand that protecting an airport or seaport begins with the outlying area. If you know what's going on out there, you can respond proactively before a threat reaches populated areas or core facilities. We give you serious protection that integrates into a total security solution to maximize your investment and provide the security you demand.

Productivity

Ports are a hub of commerce — any down time means lost revenue. Honeywell helps streamline your overall operation with a port-specific security management platform that integrates various security subsystems such as access control, badging, identity management, video surveillance, perimeter intrusion detection and video analytics. This allows the port to reduce false alarms and enables situational awareness of the entire secure area. Honeywell ensures that your people, equipment and facility will be better protected against events that can keep your organization from operating at full capacity.

Cost Savings

Our integrated security, Pro-Watch® Airport Pak security management system, and digital video and monitoring systems minimize the need for separate installations, reduce interface complications and manage total cost of ownership. Equally important, Honeywell's powerful security solutions are built on a common platform, so they're easy to implement and simple to integrate with the systems you already have in place. You'll enjoy lower operating costs and lower installation costs.

Compliance

Issuing and verifying badges and credentials is a key security component at any airport or seaport, and the need to comply with the Transportation Worker Identification Credential (TWIC) adds to the challenge. Honeywell offers state-of-the-art access control solutions that strengthen your security and improve operations. Federal and state regulations change quickly, often requiring implementation within 24 hours. Keeping up with the ever-changing security legislation and resulting mandates is a full-time job in itself — one that Honeywell is committed to helping you with. Staying on top of mandates that affect your business is part of our total security solution. It's security for your facility and peace of mind for you.

Security

If every airport and seaport were built to the exact same specifications, then a single security solution could be used everywhere. But each facility is unique, which is why we customize your security to the size, layout and other variables of each location. Like our Pro-Watch Airport Pak — it's a complete security management system designed specifically for the unique needs of airports. We've collected valuable data from our customers about their experiences to create solutions that work together to provide a complete security system that acts both as a deterrent and a means for quick response.

Thousands upon thousands of people, vehicles, planes, ships and cargo carriers pour through airports and seaports every day. And security issues can arise from any possible direction. Honeywell offers customized, integrated security solutions that are built to adapt quickly to changing situations and regulations.

Why Honeywell?

When you work with Honeywell, you're working with an experienced leader who can integrate solutions and technology to provide the level of security your organization needs.

- Recognized leader
- Convergence/integrated solutions
- Global company
- First-class service and support
- Ability to integrate most existing systems with the latest technology
- Company mission to provide a safer, more secure world

At-A-Glance Case Study

Client: George Bush Intercontinental Airport

Situation: After 9/11, providing a safe air travel infrastructure has become a top priority. The Bush Airport is located between two major roads in Houston, Texas, and has a 30-mile perimeter that needs to be surveyed 24/7. It has more than 700 departures daily from nine domestic, 12 commercial, 40 cargo and two charter airlines — and it boasts the highest on-time performance record of any major U.S. airport.

Results: Honeywell designed a pioneering intrusion detection system that provides the airport with the most advanced surveillance capabilities of any airport in the U.S. Using a variety of Honeywell cameras as well as sophisticated fixed and PTZ cameras, operators can view miles of the airport's perimeter. The cameras link to geospatial maps for easy evaluation of targets detected by ground-based radar and video analytics, and the systems are fully integrated with Honeywell's Digital Video Manager and Pro-Watch system at the airport. From a single graphical user interface, Honeywell offers the airport a complete evaluation of its security — to the very edge of the perimeter.

- Honeywell Solutions:**
- Radar Video Surveillance (RVS)
 - Advanced Video Processing System
 - MAXPRO® VMS/IP Engine
 - Pro-Watch® Security Management System
 - Fixed/PTZ Dome Cameras

// The best way to achieve a secure airport of our magnitude is by really taking a hands-on approach to understanding the needs of our airports. This new technology provides the right kind of surveillance system we need.

//

Mark Mancuso
Deputy Director of Public Safety
Houston Airport System
