

# Phone lines are vulnerable.

## The loss of phone line service is a possibility you should be aware of.

Your electronic security system relies upon your telephone lines to report a burglary or fire event. Communication to your central station is lost if your phone lines are cut by a burglar or if service is disrupted due to unforeseen events such as storms.

Reliable backup communications will ensure that your security system notifies the central station when you need it most – summoning the police, fire, or proper emergency response personnel to the protected premise.

**AlarmNet** from Honeywell is the security industry's leading nationwide alarm communications service. AlarmNet radios may be integrated with your security system to link you to your central station with uninterrupted service.

Please indicate if you are interested in the ultimate protection for your business.
