HONEYWELL SECURITY & CUSTOM ELECTRONICS SOURCEBOOK 2007

YOUR PARTNER OF CHOICE

Sourcebook 2007

Honeywell

Welcome

Dear Security Professional,

Welcome to Honeywell's 2007 Sourcebook. As you page through this catalog, you'll notice an extraordinary selection of the industry's top products along with a wealth of exclusive new solutions that address the future of alarm communications.

Honeywell's end-to-end solutions are the perfect way to increase your RMR while addressing important alarm communications challenges—including VoIP, migration from POTS, the Sunset Clause and the growth of home and business-based broadband usage. These products and services help you meet today's alarm communications needs while providing a solid foundation for future growth.

Benefits include:

- **Flexibility** - Choose from our GSM/GPRS radio, Internet, or a unit combining both for the utmost flexibility for each installation. And, our alarm transmissions send complete data in addition to the ability to upload/download the control panel.
- **Remote Control** - In the near future, you'll be able to control the system remotely from a Web browser (via GPRS or Internet) or a cell phone with our SMS text messaging system. You will also be able to receive e-mail messages about activity (both alarm and non-alarm events) on the protected premise.
- **Easy-to-Install** - Saving time during an installation reduces costs. Our speed advantage is particularly apparent when you are making the change from our AMPS radio to our new digital version. In fact, you'll save time on all installations because our radios come pre-activated.
- **Backward Compatible** - These communications and remote control services can be easily added to many of your existing installations, which helps create customer loyalty and additional RMR opportunities!

As innovators, our eyes are always on the future—continually taking technology to new levels by improving performance and delivering new and profitable business opportunities to our dealers. As we continue our tradition of innovation, we'd like to take this opportunity to thank you for your support.

Sincerely,

A handwritten signature in black ink that reads "Ron Rothman". The signature is written in a cursive, flowing style.

Ron Rothman, President
Honeywell Security & Custom Electronics

Partner of Choice

If you're looking to sell more systems, take a look at the advantages of partnering with Honeywell. In addition to delivering the newest innovations, products and technologies, we also provide the most experienced and dedicated customer and technical support teams.

We have a longstanding commitment to our independent dealers and integrators, and can help you succeed by leveraging the power of the Honeywell brand. Together, we can win by building a world that's safer and more secure while creating more opportunities for you and your business. Why partner with anyone else?

Profile

Honeywell is one of the world's leading manufacturers of electronic security systems. Our range of capabilities for residential and commercial security applications are extensive, and our products protect millions of homes, businesses and government facilities across the globe.

A History of Innovation

As industry pioneers, we've developed many of the groundbreaking advances that have shaped today's residential and commercial security systems. We've made systems easier to install and to use, developed the industry's most reliable supervised wireless products and the most flexible hybrid control panels in the industry. We are also on the forefront of advancements in long range radio, Internet alarm communications and sensor technology—including the development of the world's best-selling glassbreak detectors.

Research and Development

As a leader in technology and innovation in the security industry, we employ a talented team of 300 engineers and continually raise the bar for the future, dedicating millions of dollars annually to research and development.

Commitment to Quality

Our products are built in world-class production facilities and are subject to rigorous testing exceeding industry standards for quality and performance. Honeywell equipment complies with ISO-9001 protocols, an internationally recognized standard that defines a quality assurance system.

Support Services

Customer and Technical Support

Our team of experienced, dedicated customer and technical support specialists are always at your service. Whether your question deals with technology, product selection and compatibility or troubleshooting, they have the solution.

MyWebTech

An invaluable reference tool, MyWebTech lets security dealers research the latest technical data on Honeywell security products 24 hours a day, seven days a week from the very same comprehensive library technicians use in the company's call centers. Highlights include quick and easy access to technical data, FAQs, direct wires, installation instructions and a convenient search-by-feature library. You can obtain a user name and password by calling 800-573-0154.

Literature XPress

This popular online service, available exclusively for Honeywell Security dealers, has been enhanced this year with an even wider range of exciting, customizable collateral for you to choose from. Instantly personalize polished, professionally designed marketing materials with your logo and company name! Choose from high quality brochures, sell sheets, posters, door hangers and more. Literature XPress is fast, easy and absolutely free. Visit www.security.honeywell.com/xpress for details.
