

## **Trained Specifier Certification Training**

The Honeywell training programme provides security consultants and specifiers with the knowledge and tools necessary to confidently specify Honeywell security products. Our skilled trainers benefit from many years of experience as field engineers in their respective disciplines. This means you will receive the best possible practical expertise during your training session. Course sizes are limited to approximately 8 people to ensure a quality hands-on learning experience.

### **Course Offering**

The courses listed overleaf are scheduled for Autumn / Winter 2009/10 at our Runcorn and Burgess Hill Training Centres of Excellence. The training courses focus on Enterprise Security Management Systems, IP and Managed Video Solutions and Video Analytics. **They are offered free of charge and are of 1 day duration.**

### **How to Register**

To register for a scheduled class please call us on **08448 000 235** or email [systemsenquiries@honeywell.com](mailto:systemsenquiries@honeywell.com).

# Course Overview

The courses you can select from are as follows:

## Video Analytics

The Imagery Library for Intelligent Detection Systems (i-LIDS®) is the UK Government's benchmark standard for video analytics technology and is awarded to security products judged to have met the stringent criteria specified by the Home Office Scientific Development Bureau in the development of video based detection systems for government use. Honeywell's leading video analytics solution - Active Alert® v4.7 has been certified for use as a standalone security system in sterile

zones without the requirement of a secondary system to act as back up, illustrating the quality and reliability of the product. Following this training course, you will have a firm understanding of how best to deploy this solution.

## IP and Managed Video

Migrating from traditional Analogue to IP technology requires a sound understanding of the terminology and language used by the IT Networking profession. This course is designed to

outline and develop an understanding of the key factors of an IP Enabled CCTV System.

## Integrated Security Management Solutions

After this course you will develop a firm understanding of state-of-the-art access control that integrates the most advanced security technologies with innovative networking capabilities to bring you full-featured security solutions serving any size facility.

Please choose the date most convenient to you:
